

- A natural cognitive enhancer derived from tamarillo (*Solanum betaceum*)
- Contributes to the improvement of memory, learning and mood
- Suitable for dietary supplement applications; water-soluble for functional beverage applications
- Naturally rich in B vitamins, vitamin C and minerals

Mentarillo™ is a superfruit extract targeted for cognition.

Description

Tamarillo (*Solanum betaceum*), also known as tree tomato or tomate de arbol, is a member of the Solanaceae or nightshade family – a well-known group of plants cultivated for both food and for medicinal use. Tamarillo is native to South America and is consumed fresh, or in beverages and has a historical and modern use in both sweet and savory dishes.

Health benefits

Rich in B-complex vitamins, vitamin C as well as minerals, fiber and antioxidants, Mentarillo™ has demonstrated potent antioxidant activity which complements its recognized effect on cognition. Mentarillo™ has been shown to activate human dopamine receptor 1 which is strongly responsible for memory, learning and mood.

Science

Using a bio-assay guided approach, Frutarom has determined that Mentarillo™ may provide an ideal candidate as a cognitive enhancer due to its well-characterized mode of action on the dopamine receptor, one of the most important neurotransmitters in regulating brain function.

Dopamine plays a critical role in cognition, working memory, learning ability, sleep regulation and mood. Decreased levels of dopamine are generally age related and results in progressive cognitive impairments.

Product information

Standardized on organic acids > 4%
Type of extract powder
Dosage 750 mg/day
